Can you get
this with ray
tracing?

CS5502 Fall 2006
(c) Chun-Fa Chang

Rendering Equation

$$I(x, x') = g(x, x') \left[\varepsilon(x, x') + \int_s \rho(x, x', x'') I(x', x'') dx'' \right]$$

- $g()$ is the “visibility” function
- $\rho()$ is related to BRDF:

$$\rho(x, x', x'') = \rho(\theta'_{in}, \phi'_{in}, \theta'_{ref}, \phi'_{ref}) \cos \theta \cos \theta'_{ref}$$

From Watt's p.277

CS5502 Fall 2006
(c) Chun-Fa Chang

How to Solve It?

- We must have:
 - $\varepsilon()$: model of the light emitted
 - $\rho()$: BRDF for each surface
 - $g()$: method to evaluate visibility
- Integral evaluation → Monte Carlo
- Recursive equation → Ray Tracing
- The problem is view independent

(c) Chun-Fa Chang

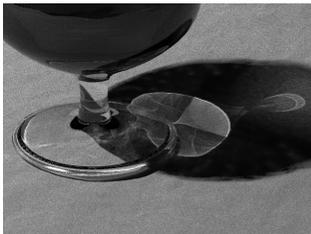

Ray Tracing Revisited

- The reflected intensity (or color) at a surface point is computed by:
 - Local reflection model (no interaction with other objects): ambient, diffuse, and specular.
 - Global model: perfect reflection and refraction.
- What if we spawn many reflected rays?

Global Illumination Algorithms

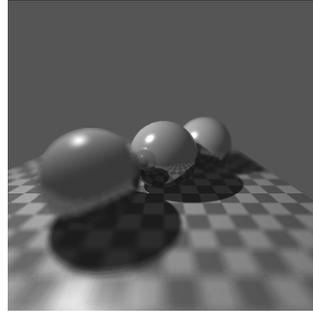

- Radiosity (topic of the next lecture).
- Distributed Ray Tracing.
- RADIANCE
- Photon Map

CS5502 Fall 2006
(c) Chun-Fa Chang

Distributed Ray Tracing

- Distribute a group of rays at a hit point to sample the “reflection lobe” (similar to a 2D slice of BRDF).
- May also distribute rays along camera aperture, time, and pixel region to produce effects of depth of fields, motion blur, and anti-aliasing.

CS5502 Fall 2006
(c) Chun-Fa Chang

Why Distributed Ray Tracing?

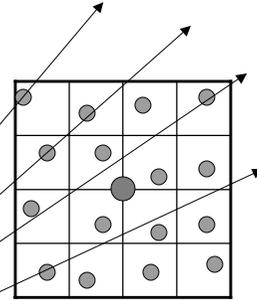

- Anti-Aliasing
- Features
 - Gloss (fuzzy reflections)
 - Fuzzy translucency
 - Penumbras (soft shadows)
 - Depth of field
 - Motion blur

CS5502 Fall 2006
(c) Chun-Fa Chang

Anti-Aliasing

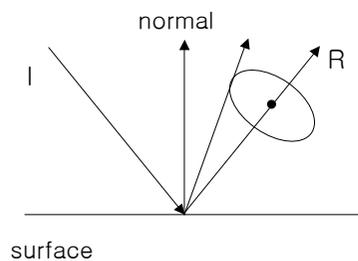

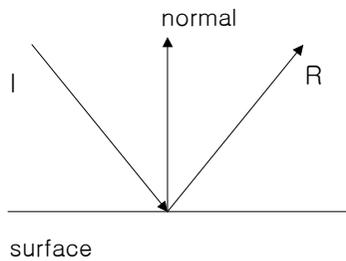

- Supersampling
- Jittering – Stochastic Method

6	10	2	13
3	14	12	8
15	0	7	11
5	9	4	1

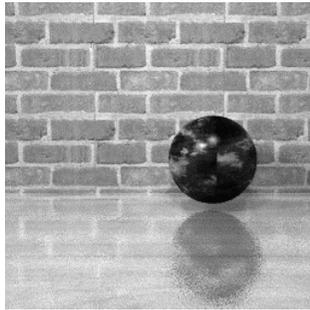

CS5502 Fall 2006

Depth of Field

F – focal length $V_P = FP/(P-F)$ $r = \frac{1}{2} (F/n) (D-P)/P$
 n – aperture number $V_D = FD/(D-F)$ $R = (-V_P/D) r$
 C – circle of confusion $C = (|V_D - V_P|/V_D) (F/n)$ $R = \frac{1}{2} C$

CS5502 Fall 2006
(c) Chun-Fa Chang

Depth of Field

Standard ray tracing:

Pixel D uses ray BD

Pixel E uses ray BE

All rays emanate from B

Distributed ray tracing:

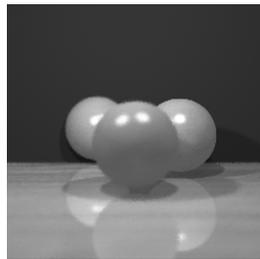

Pixel D uses rays AD, BD, CD

Pixel E uses rays AE, BE, CE

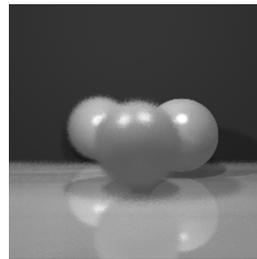

Rays emanate from lens plane

CS5502 Fall 2006

Depth of Field

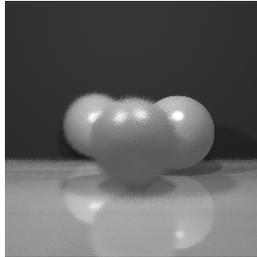

F-Stop = 5.8

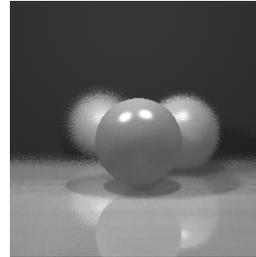

F-Stop = 2.8

CS5502 Fall 2006
(c) Chun-Fa Chang

Depth of Field

Focal Distance = 13

Focal Distance = 11

CS5502 Fall 2006
(c) Chun-Fa Chang

Motion Blur

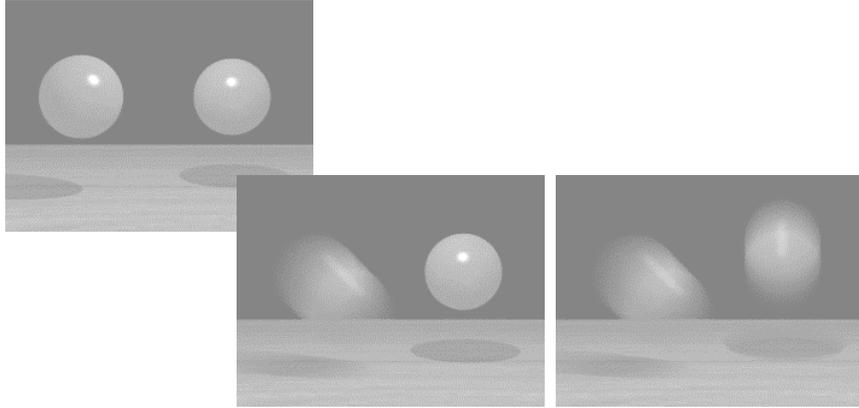

- Sampling in time
- Each element in the cell stands for a time slice
- Jitter time slice to the current time
- Move object via the current time slice

6	10	2	13
3	14	12	8
15	0	7	11
5	9	4	1

Current time = Time Slice + Jitter Time
e.g. time slice at left-upper = $6 + \text{rand}()$
