Today's Short Film

Arnold
by
Daniel M. Lara

Announcement

- Class cancellation: 10/4

CS5520 Image-Based Rendering
© Chun-Fa Chang, Fall 2004

from last class:

- *Occlusion compatible order*
 - *Artifacts of 3D warping*
 - *Layered depth image (LDI)*

Scanning 3D Objects

- UNC Laser Scanner
- Digital Michelangelo (Stanford)
- Cyberware Scanner
- ITRI Scanner and 3D Camera
- Structured Light Scanner (Intel, Light Field Mapping)

UNC Laser Scanner

- Reading room of UNC CS department
 - The depths are obtained from a laser range finder.

CS5520 Image-Based Rendering
© Chun-Fa Chang, Fall 2004

How to Get the Depths?

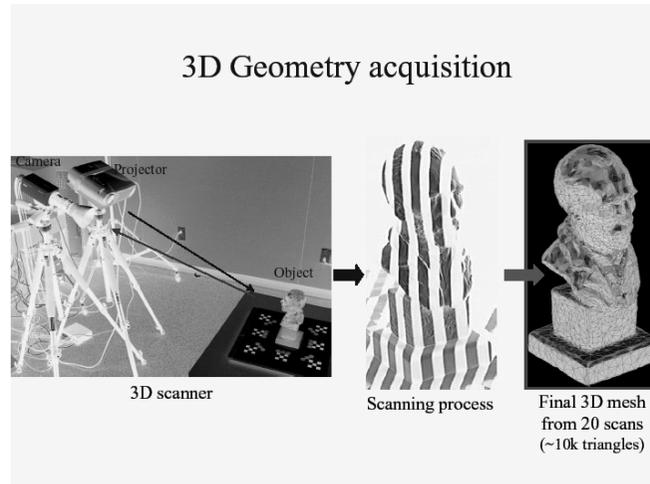

- Laser Rangefinder
- Cyberware scanner
 - used in Stanford's Digital Michelangelo project
- Stereo matching
 - e.g. structure from motion

Problems

- Merging multiple scans
- Black objects
- Shiny objects
- Public perception of the danger of laser

CS5520 Image-Based Rendering
© Chun-Fa Chang, Fall 2004

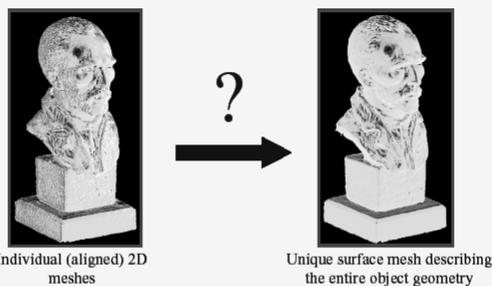

Capturing the complete object geometry

For complete coverage, need of multiple scans (16- 20)

CS5520 Image-Based Rendering

Computing a unique surface mesh

Different approaches:

- Generate a surface mesh from a set of unorganized points [Hoppe92]
- Use of a “3D wrapping” software package such as Geomagic Studio (<http://www.geomagic.com>)
- “Zipper” the set of partial meshes together into unique mesh [Turk94]
- Volumetric integration using the combined signed distance function [Curless96]

CS5520 Image-Based Rendering

Rendering

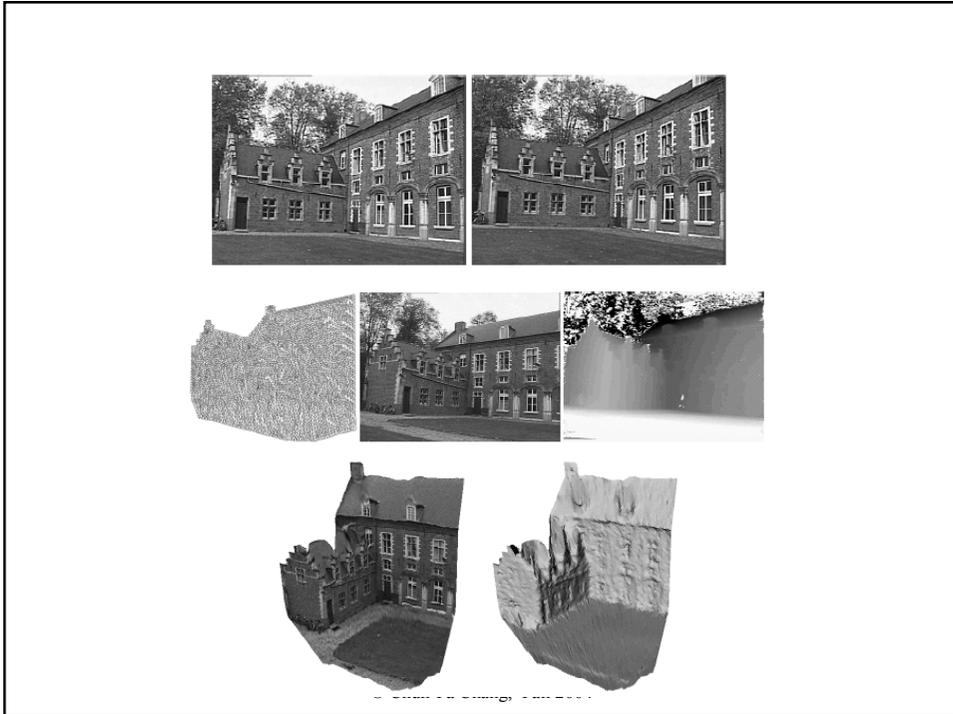

- 3D Warping
- Rendering as 3D triangle meshes
- Rendering as 3D points
 - Qsplats
 - Surfel, Surface Splatting
- Surface light field (or light field mapping)

Per-Pixel Depth: Why So Hard?

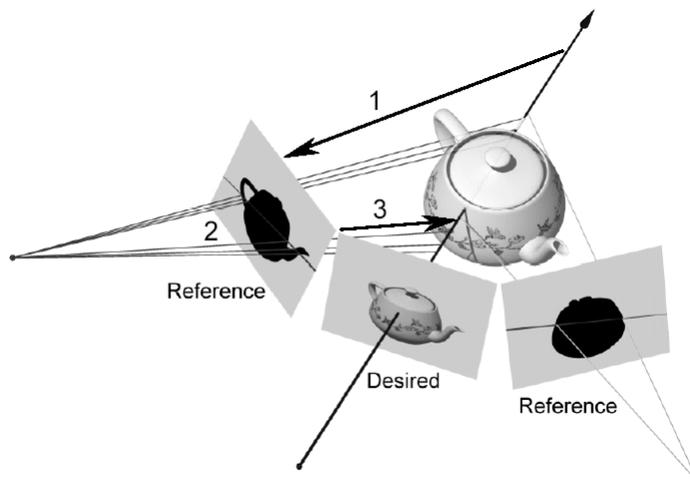

- Getting per-pixel depths is hard:
 - A classic computer vision problem: automatically finding (sparse and dense) pixel correspondences between 2D images.
- Epipolar line search:
 - Color may change (e.g., specular reflection)
 - Multiple matches possible (e.g., repeating pattern)

Visual Hulls

- Let's just give up on finding the exact match along the epipolar line.
- But finding the intersection with the silhouette is easy!
