Question 1

Suppose a coin is tossed 12 times and there are 3 heads and 9 tails.

How many such sequences are there in which there are at least 5 tails in a row?

Question 1

We use | for head and O for tail:

O|OOOOO|OO|O

Clearly, the tails were divided into 4 groups by the heads.

Question 1

Also, **5** is just larger than **half of 9**.

Therefore, we can try to find the number of ways to divide **9** tails into **4** distinct groups with one group have at least **5** members.

$$4 \times \binom{4 + (4 - 1)}{4 - 1} = \mathbf{140}$$
