

Photorealistic Rendering vs. Interactive 3D Graphics

(An Introduction to Digital Image
Synthesis)

CS5502 Fall 2006
(c) Chun-Fa Chang

Short Film Festival

- I will show a short film at the beginning of each class, so don't be late!

CS5502 Fall 2006
(c) Chun-Fa Chang

Course Positioning

- This course focuses on the picture quality, not on the rendering speed.

CS5502

Photorealism;

Complex lighting simulation

e.g., ray tracing, radiosity, photon map.

vs.

CS6500/CS5500

Rendering speed;

Simplified lighting models

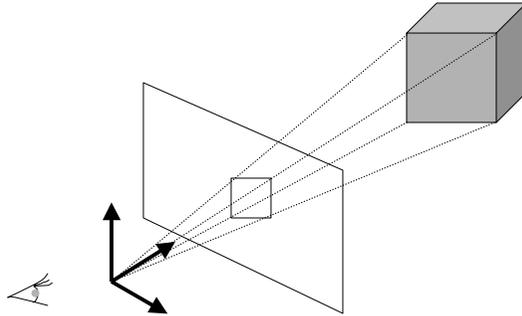

e.g., transformation and lighting, rasterization, graphics hardware.

How Do You Draw a Picture (Without a Computer)?

- What is your subject?
- Viewing Parameters:
 - Camera, Picture Frames, Resolutions
- Many ways to specify it:
 - (1) eye, focus length, image plane
 - (2) eye, direction, FOV, up vector

3D to 2D Projection

- OK, so we can map a 3D point (or vertex) to 2D image.
- But what about a 3D surface?
- Polygons are made from points.
- Actually, we only need triangles!

CS5502 Fall 2006
(c) Chun-Fa Chang

Scan Conversion

- Also called rasterization.
- The 3D to 2D Projection gives us 2D vertices (points).
- We need to fill in the interior.

An Overview of 3D Pipeline

- The above can be implemented in hardware.
- Z Buffer to detect hidden surfaces.
- Other transformations not mentioned here: Modeling and Viewing.
- Browse Chapters 5 & 6 of Watt's book if you're not familiar with it.

CS5502 Fall 2006

“...But They Don't Look Real.”

- Most things are not flat or simple geometry like spheres and cones.
- We need correct surface colors and shapes (and more)

CS5502 Fall 2006
(c) Chun-Fa Chang

- We also need correct lighting.
- Textures help, but not enough.
- Even simple things like CD can be challenging.

CS5502 Fall 2006

Real-time Graphics

- They're becoming darn good!

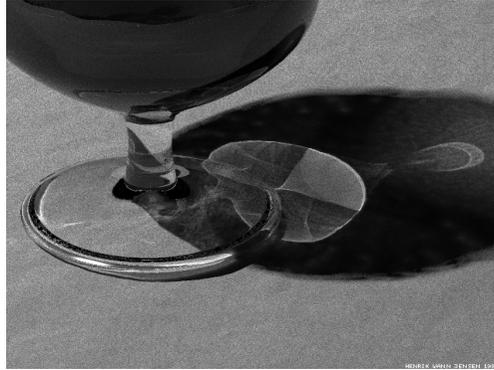

With the help of the GeForce FX, RalliSport achieves a new level of realism with the self-shadows, incredible reflections, extremely high-polygon cars, and incredibly detailed environments.

But...

- Some effects are hard to do in hardware, such as the caustics:

A Different View: Ray Tracing

CS5502 Fall 2006
(c) Chun-Fa Chang

- Actually inverse ray tracing.
